

Nikhil Chaudhry

Jaipur, Rajasthan • +91 8290299261 • nikhil121.work@gmail.com

Full-stack developer with hands-on experience in React, Node.js, Express, MongoDB, PostgreSQL, and TypeScript. Built and deployed multiple production-style projects, including a booking platform with transaction-safe scheduling and a JWT-secured MERN application with role-based access. Strong focus on clean REST API design, data integrity, and shipping working products. Seeking a junior full-stack role.

Projects

Job & Internship Application Tracker (MERN) | [Live link](#) | [GitHub link](#)

- Built a full-stack app to track job and internship applications, with a React (Vite) frontend and a Node/Express + MongoDB REST API.
- Implemented JWT authentication with bcrypt password hashing and protected routes, plus full CRUD with per-user ownership checks and input validation.
- Connected all API endpoints to the UI with optimistic updates on delete (no full-list re-render), and deployed the frontend on Vercel.
-

Appointment Booking System (TypeScript, Express, PostgreSQL, React)(almost done)

- **Core features:** users and providers with role-based access, time-slot management, booking and cancellation, and JWT auth.
- **The impressive part:** preventing double-booking with database constraints and transactions, so two people can't grab the same slot at the same time. Interviewers love this because it shows you understand concurrency, not just CRUD.
- email confirmations, a few API tests, and a Postman collection.

Skills

- **Languages:** JavaScript (ES6+), HTML, CSS
- **Frontend:** React (Vite)
- **Backend:** Node.js, Express, REST APIs
- **Database:** MongoDB, Mongoose
- **Auth & Deployment:** JWT, bcrypt, Vercel
- **Currently learning:** TypeScript, Postgrass , SQL

Education

JAN 2027

Bachelor of Computer Applications | Chandigarh University
